MUSEUS UPV

The great impact of science and technology on culture and society is unquestionable and has been going on since the beginning of humanity, from the invention of the simplest instruments to the most complex and modern technologies. As a result of the practical use of scientific knowledge throughout history, the thread of the exhibition uses the diverse historical-artistic and scientific-technological heritage housed at the Universitat Politècnica de València (UPV) to identify the most significant technological instruments and reflect on the conflicts generated by scientific progress about the social individual and the phenomenon of globalisation.

The Art Collection and Heritage Department of the UPV is planning this exhibition to enhance the value of its collections and exploring new approaches and readings in order to establish convergent dialogues around art, science and technology.
